

ADIRONDACK ELITE CORE (ADK ELITE)

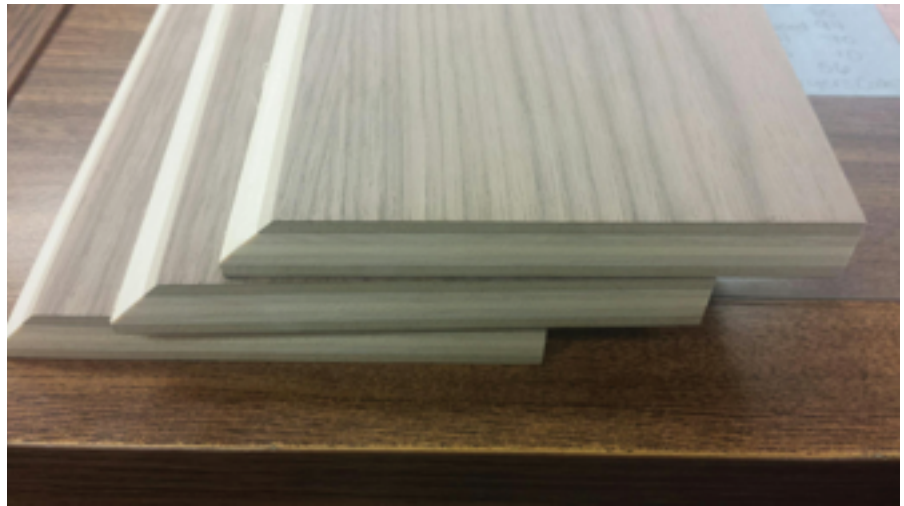

Features & Benefits

- Uniformity in panel thickness for fabricating cabinets, store fixtures, displays, and other woodworking applications.
- Using a thin HDF cross-band under the face and back veneer eliminates core telegraphing for a superior finish on any project.
- The best of both worlds for weight and strength. The veneer core center provides superior screw holding strength while providing a lighter weight panel compared to MDF and PBC panels.
- Wide variety of available species in natural veneer and reconstituted veneer.
- The ADK Elite core can be used for laminating plastic laminates, foils, paperback veneer and also for painting.
- Manufacturing facility located close to the two thirds of the US population and end-users for quick deliveries and last minute orders.

ADK Elite Component Specifications:

ADK Elite is a high quality HDF cross banded veneer core panel which is produced in the USA.

1. Faces/Back Veneer: ADK Elite veneered panels are available in a wide selection of popular decorative hardwood and softwood species, and a wide selection of reconstituted veneer species.
2. Thin HDF Cross bands: Eliminates core telegraph at the panel surface whether the panel is veneered or not.
3. Veneer Core Inner Plies: Poplar is a preferred veneer core species for decorative hardwood plywood applications. All inner plies have been composed limiting core voids.

Product Specifications:

ADK Elite veneered :

- Thickness: 1/2", 3/4", 1"
- Width x Length: 48.5"W x 96.5"L

ADK Elite core (w/o veneer) :

- Thickness: 7/16, 11/16", 3/4"
- Width x Length: 48.5"W x 96.5"L
